

STANDARD ABBREVIATIONS— ELECTRONIC SYSTEMS INPUT/OUTPUT MESSAGES

1. GENERAL

1.01 This section describes the Common Language Standard Abbreviations for Electronic Systems Input/Output Messages. It revises and replaces Section 005-104-100, *Abbreviations, Maintenance Teletypewriter Input and Output Messages* (Issue 2, in its entirety).

1.02 The abbreviations contained in this section are a subset of (contained within) the *Common Language Standard Abbreviations—Master List* (Sections 751-410-101 through 751-410-121). For additional information concerning Common Language Standard Abbreviations, refer to Section 751-410-100, *Common Language Standard Abbreviations—Description*.

1.03 Questions concerning these abbreviations and requests for additional abbreviations should be directed to the Head, Common Language Department 9114, Bell Laboratories via the appropriate Operating Company Common Language Contact. Other Bell System Companies should direct their inquiries through normal organizational channels to the Common Language Department.

2. ABBREVIATIONS FOR ELECTRONIC SYSTEMS INPUT/OUTPUT MESSAGES

2.01 The *Electronic Systems Input/Output Message Abbreviations* are shortened forms of words or groups of words for use in communications with electronic systems.

2.02 All Electronic Systems Input/Output Message Abbreviations are unique because of the requirement for accurate machine interpretation. In some cases, due to this uniqueness constraint, the Common Language Standard Abbreviations were not satisfactory and unique abbreviations were assigned. These are designated as "Electronic Systems Only" in the *Common Language Standard Abbreviations—Master List* (Sections 751-410-101 through 751-410-121). The listing of abbreviations in this section contains only those abbreviations that are unique and satisfactory for Electronic Systems Input/Output Messages.

2.03 In general, tradenames are not abbreviated. However, due to the extensive usage of the tradename, certain tradename abbreviations were adopted, eg, TT for Touch-Tone®. Under no circumstance shall abbreviations for tradenames be used in communications with non-Bell System Companies.

2.04 The listing consists of two parts. The first part is the word or word combination, arranged alphabetically, followed by the abbreviation (see Part 3). The second part is an alphabetical arrangement of the abbreviations, followed by the word or word combinations they represent (see Part 4).

3. WORDS AND THEIR ABBREVIATIONS

WORD(S)	ABBREVIATION	WORD(S)	ABBREVIATION
A	A-LEVEL	ALEV	ALTERNATE ROUTED
